

# Space FBT650 Bluetooth with Hi-Fi Sound for the modern workplace and on the road

## Relaxed work in the open space office

Open workspaces are great for working together, but they can also cause a lot of environmental noise. Thanks to the advanced passive background noise suppression and the crystal clear sound in hi-fi stereo quality, you can focus on the conversation without disturbing distraction. It forms your personal oasis in a sea of hectic everyday noise.

## Durable construction

The joints have been designed in such a way that they can easily cope with any strain in daily use. Our experience has shown that the joints are an important factor in handling the headsets.

## Everything under control

The freevoice Space has intuitive controls for adjusting the volume, answering and ending calls and muting the microphone. Pairing with a Bluetooth device (PC, mobile or tablet) is child's play.

## UC Manager for Microsoft and SfB, 3CX etc.

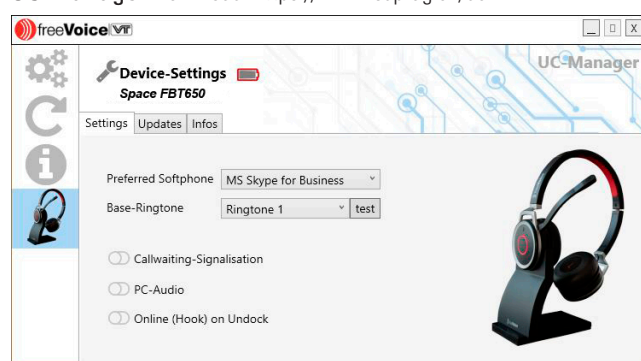

Headsets are usually recognized as simple audio devices. In order to use additional functions, such as call control, additional software is required to ensure connection to the various softphones and applications.

Headset FBT650B

USB-Dongle FCT170 (optional)
